

SuperHero API

Provides:

This API provides stats and features of superheroes from all comic book universes.

Key Provisioning:

Pain factor (0=ezy...5=nightmare): **2**

- 2503373653110667
- Put after url and then put a "/" then a number
 - Ex: <https://superheroapi.com/api/2503373653110667/1>

Quotas:

- ...

The Good:

- Pretty simplistic in how it does things:
 - Typing the id of the hero before asking for other features of the hero is intuitive
- Has a search feature that is also helpful and more useful than randomly getting a hero with a number you hope is an id number
- Gives information in a very clean and minimalistic way that makes it easy for usage
- JSON string is very easy to retrieve and format information

The Bad:

- The id numbers are a bit random and since it doesn't pull from one universe, it is hard to tell if it is in alphabetical order.
- Search is not so helpful really since it shows everything at once
 - This includes all the heroes with similar names or heroes that had their mantles taken on by multiple people like Batman.

The Ugly:

- The search results are pretty ugly and jumbled up
 - Is better with id number
- But id numbers can't give me the hero I want since we don't know the ids
